

Pomen raziskovalnih podatkov pri vrednotenju znanstvenega dela

Miro Pušnik, Centralna tehniška knjižnica Univerze v Ljubljani

Odprta znanost 2019

Namen vrednotenja raziskovalnega dela

Vrednotenje raziskovalnega dela temelji na znanstvenih objavah

Dodeljevanje sredstev, promocija, habilitacije...

Kvantitativne in kvalitativne metode

Metodologija vrednotenja v Sloveniji

Projekti in programske skupine na ARRS: prevladujejo kvalitativne metode

Habilitacije na univerzah: pogosto vključene elementi kvantitativnega vrednotenja, podatkovni vir je SICRIS (A1, A2, A3, A1/2, A' A" ...)

RD v metodologija ARRS niso posebej omenjeni, jih pa izrazito omenja osnutek Zakon o znanstvenoraziskovalni in inovacijski dejavnosti <https://e-uprava.gov.si/drzava-in-druzba/e-demokracija/predlogi-predpisov/predlog-predpisa.html?id=8644>

Ključna vprašanja

Ali predstavljajo raziskovalni podatki znanstveno delo v smislu samostojne entitete v okviru tipologije znanstvenih del, ki so podvržene evalvaciji?

Če da, je vprašanje, na kak način izmeriti oziroma oceniti vplivnost oziroma kakovost posameznih podatkovnih setov?

Če ne, je vprašanje, kako ovrednotiti raziskovalne podatke v okviru obstoječih tipologij znanstvenih del?

Možni kazalniki za ocenjevanje vplivnosti oziroma kakovosti raziskovalnih podatkov

Obseg ponovne uporabe podatkov s strani drugih uporabnikov

Vključitev podatkovnih setov v večje sete ali druge oblike znanstvenih del

Obseg uporabe programske opreme za pridobivanje podatkov s strani drugih uporabnikov

Možne implikacije v praksi: število citatov, statistike uporabe (npr. vpogledi, prenosi), altmetrika (npr. spletne povezave v družbenih omrežjih, shranjevanje v osebnih bibliografskih zbirkah (npr. Mendeley, CiteULike, BibSonomy, Delicious), omembe v blogih ipd.)

A Comprehensive Assessment of Impact with Article-Level Metrics (ALMs)

ALMs are quantifiable measures that document the many ways in which both scientists and the general public engage with published research. Traditional metrics, which consider only citation count and journal name to assess impact, capture a narrow view of a work's value and do so only after the accumulation of citations in academic literature.

PLOS Article-Level Metrics

<https://www.plos.org/article-level-metrics> ; in their ability to:

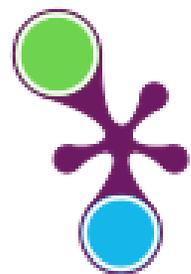

Assess impact before the accrual of academic citations

Incorporate both academic and social metrics

Reflect changing influence of a work over time
